Biogeography
Course Outline — Spring 2014

11.00 – 11.50 MWF • 112 Transportation Building

Course description

Biogeography deals with spatial and temporal patterns of biological diversity and the factors that govern the distribution and abundance of taxa. This course will address two of its subfields: historical biogeography – the origin, dispersal, and extinction of taxa and biotas; and ecological biogeography – the role physical and biotic environments play in determining taxonomic distributions. We will explore the ecological, evolutionary, climatological, and paleontological foundations for the distribution of species and biological communities. The course will review many of the field’s classic papers, the current synthesis of biogeographic theory, and the application of biogeography to conservation.

Course goals

By the end of the semester, you will be able to:

• Describe the historical and ecological factors which influence the pattern of life on earth
• Apply the scientific method and philosophy of hypothesis testing to biogeographic problems
• Explain how advances in paleontology, climatology, evolution, plate tectonics, molecular systematics, and ecology have shaped the modern synthesis of biogeography
• Evaluate modern conservation and mitigation strategies using biogeographic theory
• Analyze and interpret scientific literature, through writing and class discussion

Prerequisites

This course is intended for upper classmen and graduate students with a background in biology and ecology. Enrollment is recommended only for students who have taken IB 150 (Organismal & Evolutionary Biology) or have completed equivalent coursework. If you have not taken IB 150, please speak to the instructor before enrolling in this course.

Instructors

Dr. Surangi W. Punyasena, Assistant Professor, Plant Biology
Office hour: Fridays 1.00 - 2.00, Morrill Hall 139 (email to confirm)
punyasena@life.illinois.edu
Derek Haselhorst, Grading Assistant, PhD student, Ecology, Evolution, and Conservation Biology
derek.hasehorst@gmail.com
Textbooks

*Biogeography, Fourth Edition*
MV Lomolino, BR Riddle, RJ Whittaker, and JH Brown

*Foundations of Biogeography: Classic Papers with Commentaries*
MV Lomolino, DF Sax, and JH Brown (editors)
University Of Chicago Press; 1st edition (July 1, 2004)
ISBN 0-22649-237-0

Textbooks are available for purchase at the university bookstore and will be on reserve at the Grainger Engineering Library. Additional reading is available as E-reserves under the course rubric (https://reserves.library.illinois.edu/ares/).

Course Website

You should have access to the class Moodle account if enrolled in this course: https://moodle.life.illinois.edu/ [https://moodle.life.illinois.edu/course/view.php?id=439]. The site will contain course announcements, links to the reading, and links for uploading assignments.

Grading

There are four grading criteria: in-class activities, exams, weekly discussions with written assignments, and a term paper with prospectus, draft, and peer review Regular attendance is expected, as the success of this class depends on the full participation of every student. *Students with excessive unexcused absences may lose up to one letter grade from their final grade.*

**In-class assignments and participation** (10%)

Short in-class written assignments will be part of the lecture, and will be graded on a credit/no credit basis. Regular participation in lecture and discussion will informally count toward your final grade.

**Exams** (30%)

There will be an in-class midterm (03/17/14) and scheduled final (05/16/14), each worth 15% of your final grade. The final is cumulative and will cover the entire semester’s material. Exams are closed book and closed notes, though essay questions will be distributed beforehand. All questions will be short answer or essay.

**Friday Discussions** (35%)

Small group discussions of assigned reading will be held on Fridays. Each group member will responsible for turning in a one-page weekly response. One student will be responsible for preparing discussion questions on the reading each week and leading the discussion. This responsibility will rotate among group members. Participation will be graded through peer evaluations. Please see the section on “Friday discussions” for more information on grading and logistics.

**Term paper** (25%)

The term paper is a 5-page research proposal on a biogeographic topic. There are three components: a prospectus (due 2/17/14); peer review of drafts (3/31/14); and the final paper (due 5/2/14). Please refer to the handout for the term paper assignment for more information.
**Friday Discussions**

Given the pace of scientific advancement, there are few opportunities to read and discuss the seminal works that shaped the biogeographic revolution. While the lectures on Monday and Wednesday serve as introductions to fundamental concepts in biogeography, the Friday discussions are designed to introduce you to the original papers that defined the discipline and the more recent literature stemming from this work.

*Foundations of Biogeography* is an annotated collection of these seminal works. I have chosen a small selection of papers that broadly relate to the topics covered by this course. Our discussion will focus on the papers, but the introductions to each chapter will provide the background you need to place the assigned papers in a historical and disciplinary context, and will help you with your written responses.

By the end of the semester, you will:
- Have read a broad cross-section of the biogeographic literature
- Be able to describe several key papers that shaped the field
- Be able to interpret and critique the primary scientific literature
- Have had experience independently leading a group discussion

**Instructions**

The class will be divided into ~15 groups of 4-5 individuals. Groups will be reassigned every 4 weeks.

For the first 25 minutes of class, you will discuss the assigned reading within your group. In the final 20-25 minutes of class, each group will be asked to present a summary of their discussion. The responsibility of leading the small group discussion will rotate among the group members each week.

The week’s leader is responsible for preparing 4 or more questions on the reading to start the discussion. A copy of these questions should be uploaded to Moodle before the beginning of class. (Please cut and paste your questions or upload a PDF). All members of the group will turn in a short weekly response (one page). The response must include an original observation or question that demonstrates that you have read and understood the paper. This should also be uploaded to Moodle before class. (Please cut and paste your response or upload a PDF). I recommend printing a hard copy for your own use during the class discussion.

The final component of your discussion grade is peer evaluations of your participation effort. You will be evaluated on a 10-point scale. There will be ~4 evaluations, each time groups are reassigned.

**Grading Rubrics**

*Discussion questions (out of 10 points, 15% of final grade)*

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>+4 points</td>
<td>List at least four questions based on the assigned reading</td>
</tr>
<tr>
<td>+4 points</td>
<td>Questions are phrased to initiate discussion</td>
</tr>
<tr>
<td>+2 points</td>
<td>Questions demonstrate a deep and focused reading of the material</td>
</tr>
<tr>
<td>Grade = 0</td>
<td>One copy of the questions is not uploaded to Moodle before class</td>
</tr>
<tr>
<td>Grade = 0</td>
<td>Absence from the discussion on your assigned date</td>
</tr>
<tr>
<td>-5 points</td>
<td>Arriving more than five minutes late to class on your assigned date</td>
</tr>
</tbody>
</table>
**Weekly response (out of 10 points, 15% of final grade)**

<table>
<thead>
<tr>
<th>Points</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>+3</td>
<td>Response demonstrates a focused reading of the material</td>
</tr>
<tr>
<td>+3</td>
<td>Response demonstrates an understanding of at least one major concept covered by the material</td>
</tr>
<tr>
<td>+2</td>
<td>Response makes connections to the topics discussed in lecture</td>
</tr>
<tr>
<td>+2</td>
<td>Response is grammatically correct and cogent</td>
</tr>
<tr>
<td>Grade = 0</td>
<td>One copy of the response not turned uploaded to Moodle before class</td>
</tr>
</tbody>
</table>

**Peer evaluation/participation (out of 10 points, 5% of final grade)**

<table>
<thead>
<tr>
<th>Points</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>+5</td>
<td>Regular participation (contributes more than twice to the discussion)</td>
</tr>
<tr>
<td>+3</td>
<td>Quality of the discussion questions (whether questions initiated a thoughtful discussion, raised new insights)</td>
</tr>
<tr>
<td>+2</td>
<td>Quality of participation (thoughtfulness of comments, helpfulness of comments toward overall understanding of the group)</td>
</tr>
<tr>
<td>-2</td>
<td>Deduction for any unexcused absence from Friday discussion</td>
</tr>
</tbody>
</table>

**Course Policies**

All students are assumed to have read and understood the “Code of Policies and Regulations Applying to All Students,” University of Illinois, and will be expected to act accordingly. The Code is available online at: [http://www.admin.uiuc.edu/policy/code/index.html](http://www.admin.uiuc.edu/policy/code/index.html). Extended absences require a note from the Office of the Dean of Students (for undergraduates) or written explanation (for graduate students). Dean’s notes are also required to receive credit for missed or late assignments.

**Disabilities and Religious Observances**

Please make any requests for accommodations for disabilities or religious holidays within the first two weeks of class.
